Meeting the Milestones in the Responsible Sourcing Roadmap

Good Practice Guidelines for the Renewable Energy Sector

re-sourcing

Challenging Times Require Responsible Solutions

The European Union's Green Deal is the European Union's bold ambition to tackle the growing threat of climate change and environmental degradation. The targets set under the Deal require innovation and the use of new technologies in renewable energy, mobility and digital, and electronic goods. The sector chain's resources and products for these sectors are spanning across the globe.

How to ensure that the extensive sourcing of raw materials required for the green transition does not lead to social and environmental harm?

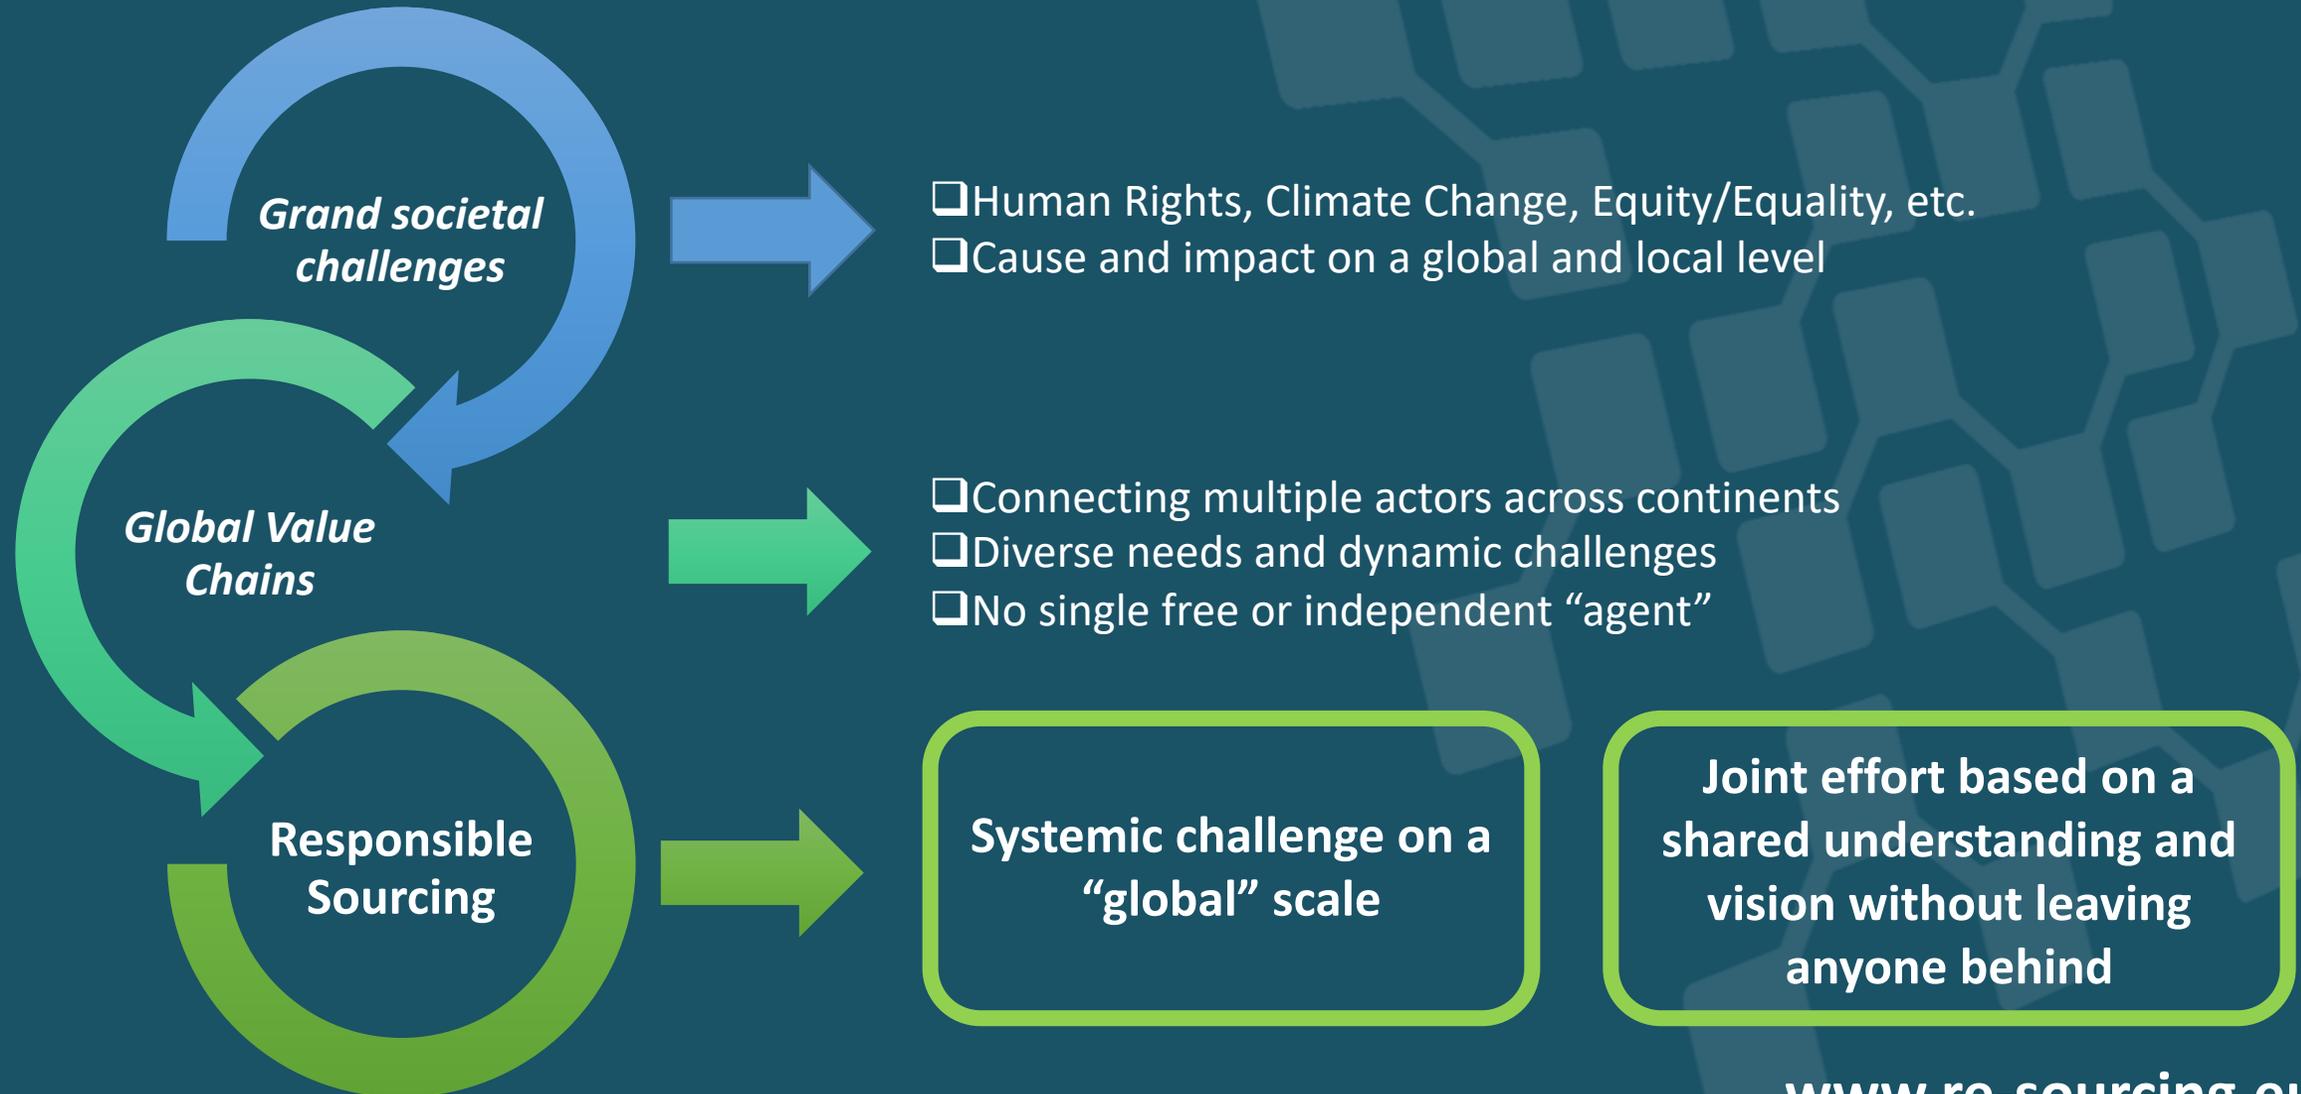

Dr. Masuma Farooqi (UK)  
Marie-Theres Kügerl (UK)  
Noe Barrios

We kicked off in November 2019.  
This is our plan until October 2023.

Join our  
events and  
talk to us!

Discuss + refine  
RE-SOURCING results  
(esp. Roadmaps)

Work towards a global  
vision and definition of  
Responsible Sourcing

**Starting point:**

All needs are important in their own right, yet we live in a world of limited resources (material, human, financial).

**!!We have to make choices!!**

**Guiding question:**

How to make choices, how to better understand the choices of others and how to reconcile them?

**How will we do that?**

- Better understand your needs and priorities
- Communicate and refine our understanding of Responsible Sourcing of mineral raw materials
- Identification and comparison of priority areas

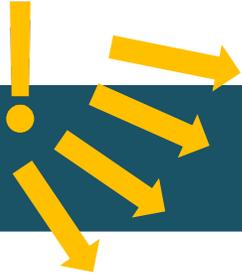

**To achieve what? (→ open for discussion)**

- Balance between geographical and stakeholder-specific diversity and harmonization
- Global level playing field
- Leave non one behind, i.e. share burdens and benefits

RE-SOURCING is an EU-funded project building a Global Stakeholder Platform to connect and assist policy-makers, businesses, and civil society to advance responsible sourcing of raw materials in mineral value chains.

We are developing a globally accepted definition of responsible sourcing and roadmaps for the Renewable Energy, Mobility and Electronics Sectors.
